

Adding A Link to Your Post

Go to the page that you want to link to and copy the link location from the browser address field.

In this case we are linking to the rental page.

Then click on the text you want to make a link. Then click on the chain link to open up the pop up Insert/Edit link window like so...

Paste the Link into the Link URL area and add a title, if you are linking to your own site keep the Target: Open link in same window. If going to another site then make the Target: Open link in new window.

Click on Insert & Save the post.
